

H Type 6 pot caliper

Specifications:

- Disc sizes 350-380mm
- Disc width 28-32mm
- Piston sizes 28/32/36mm
- Piston area 48.75cm
- Effective radius 164mm
- Mount face to top of pad 56.2mm
- Weight 2.5kgs
- Thread sizes 3/8 UNF
- Mounting bolts M10
- Caliper body material Billet 7075T6 aluminium
- Piston Material Hard anodised aluminium
- Finish Hard anodised
- Seal details Seal on piston
- Dust sealed Yes
- Anti knock back springs Yes
- Stainless steel pad abutments
- Mintex pad ref MDB1292

The H type caliper is CNC machined from high strength billet alloy in a two piece body configuration and offers excellent body stiffness at a low weight. It is intended for high performance road and track day use with a wide choice of pad compounds available. Differential piston bores are utilised to combat taper wear of the brake pads with the pressure seals fitted to the backs of the pistons to keep fluid temperatures down. The caliper bodies are hard anodised to protect against corrosion and dust seals are fitted to protect the piston bores
